

THE CONCEPT

Aidely
4000

NIDELV SINCE 1929

When Nils Nilsen started building Nidelv boats in 1929 he already had 18 years' of experience as a builder of boats. At that time money was scarce and boatbuilders were kept going by the boating environment, a belief in what they were doing and a love of their craft. Since then, only the sea and the enthusiasm generated by boat life has remained the same. Boatbuilding has been in a continuous process of change, but Nils Nilsen and Nidelv realised the importance of keeping the traditions of craftsmanship alive. Today Nidelv is above all else known as a supplier of quality products. Nidelv 4000 is the result of a pooling of knowledge and experience. It was felt that time had come to put all the company's resources and 60 years of experience into the creation of

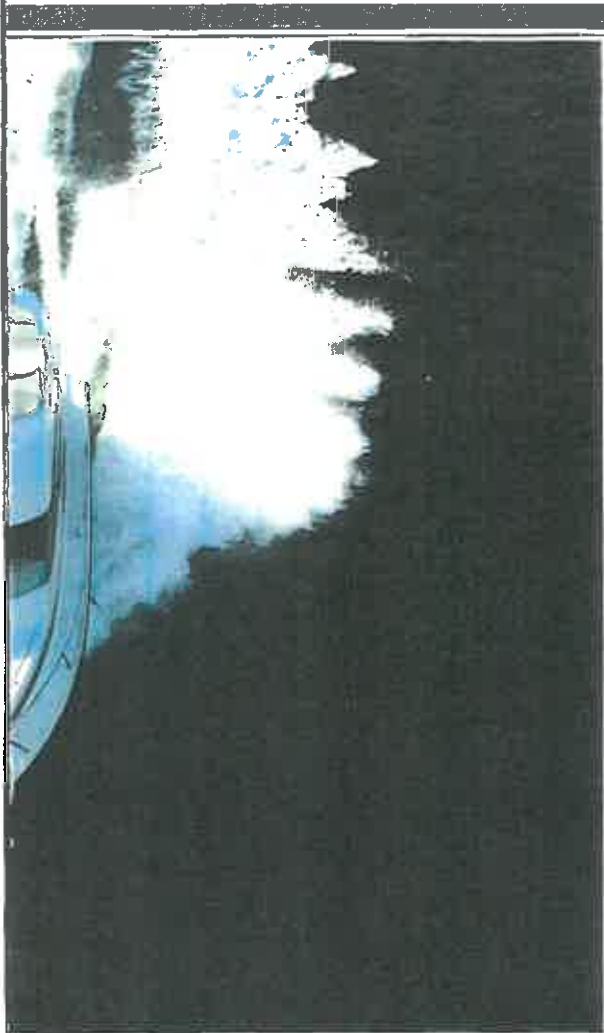

one large pleasure boat for the international market. This led to work starting on the Nidelv 4000 in association with hull constructor Jan Bjerke and industrial designers from Scandinavian Marine Design. After 4 years at the drawing board, in the development department and in the market Nidelv is able to present a product that is both wellconceived and new. The quality of the Nidelv 4000 is apparent not only in its seaworthiness, its fittings and durability. It is a complete concept where the total utility value is incorporated in the product.

THE LAND OF BOATBUILDERS

THE CONCEPT

DESIGN

Nidelv 4000 is founded upon an understanding of form, function and materials. The concept itself is the creation of three industrial designers backed by a tradition of craftsmanship spanning 60 years. Its lines, layout and practical solutions are the result of several years' work at the drawing board, in the development department and in the market.

PERFORMANCE

The hull of the Nidelv 4000 has been designed by the renowned boat constructor Jan Bjerke. The test results demonstrate the best possible combination of effect and economy. At a cruising speed of 25 knots the diesel consumption is a modest 52 l/h using 2 x Volvo Penta AQAD 41 Duoprop. With a load of 6.8 tons it takes only 15.2 seconds to reach the cruising speed of 25 knots.

LIVING QUARTERS

'Home away from home' is the philosophy behind Nidelv 4000's living quarters. In fact, preparing good food, eating and sleeping in Nidelv 4000 is no more complicated than it is at home. The use of teak and modern textiles creates a comfortable atmosphere, and the craftsmanship is among the best Norwegian boatbuilding has to offer.

PERFORMANCE

ECONOMY

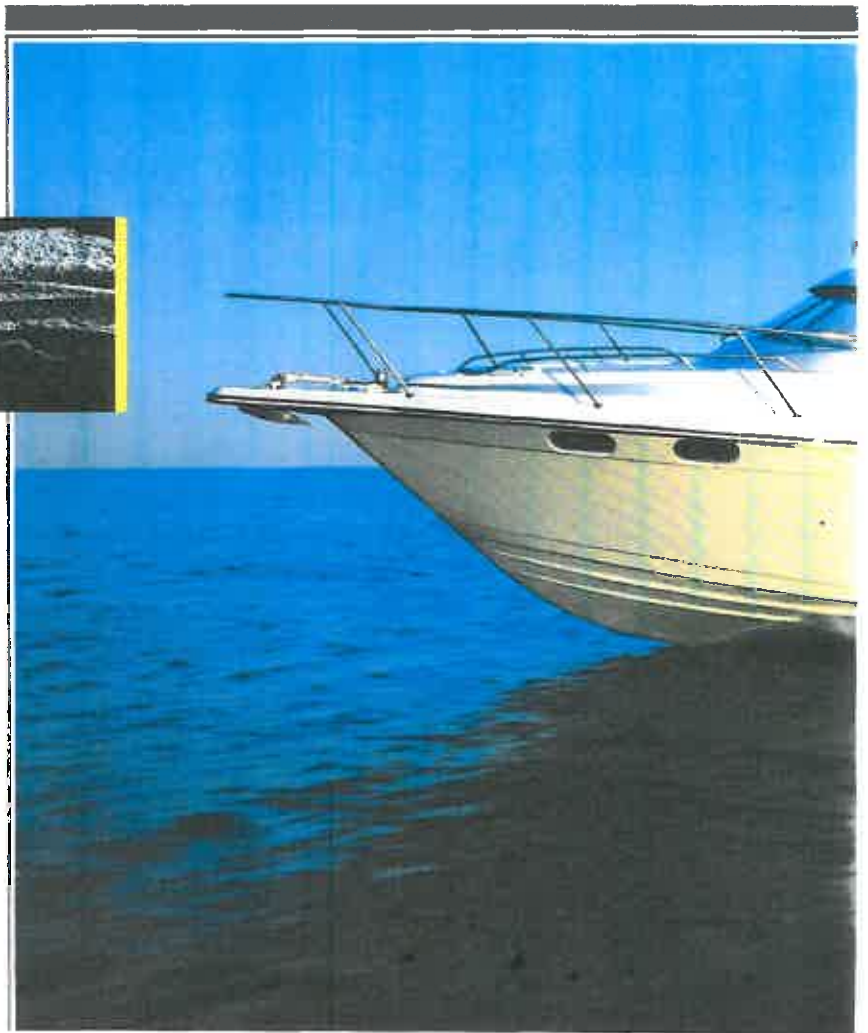

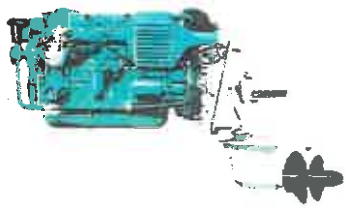

SAFETY

Volvo Penta's representatives tell us that the Nidelv 4000 has shown outstanding results. With 25 people on board and full diesel and water tanks the boat reached a speed of over 30 knots. In spite of its size and weight it is unusually easy to steer. The Nidelv 4000 has no noticeable planing threshold.

All tests on the Nidelv 4000 have been carried out using a Volvo Penta AQAD 41 Duoprop twin installation. These light and compact engines combined with aquamatic and duoprop provide quicker acceleration, better manoeuvrability, lower fuel consumption and a higher top speed. With Volvo Penta you are also assured of service in more than 130 countries.

OLD PRODUCT LINE

A relatively short foredeck and an elevated steering position provide full freedom of vision. The instruments are all easily accessible and arranged logically in accordance with their function. The entire roof above the pilot seat can be opened to give a sensation of the elements on days when the flybridge would not normally be used.

The Nidev 4000 has a flybridge, or sundeck, which is, in a word, big. From his seat the pilot has the engine and trimming controls at his command, as in a cockpit.

The pilot seat in the Nidev 4000 is comfortable, and apart from having an adjustable height and angle, it can be folded to provide a support when the craft is being piloted in standing position.

The aftdeck which is all of 6 square metres is flush with the bathing deck. This, together with the forward sun deck and the flybridge, gives the Nidev 4000 a greater utility area than most of a similar size. The Nidev 4000 makes it just

LIVING QUARTERS

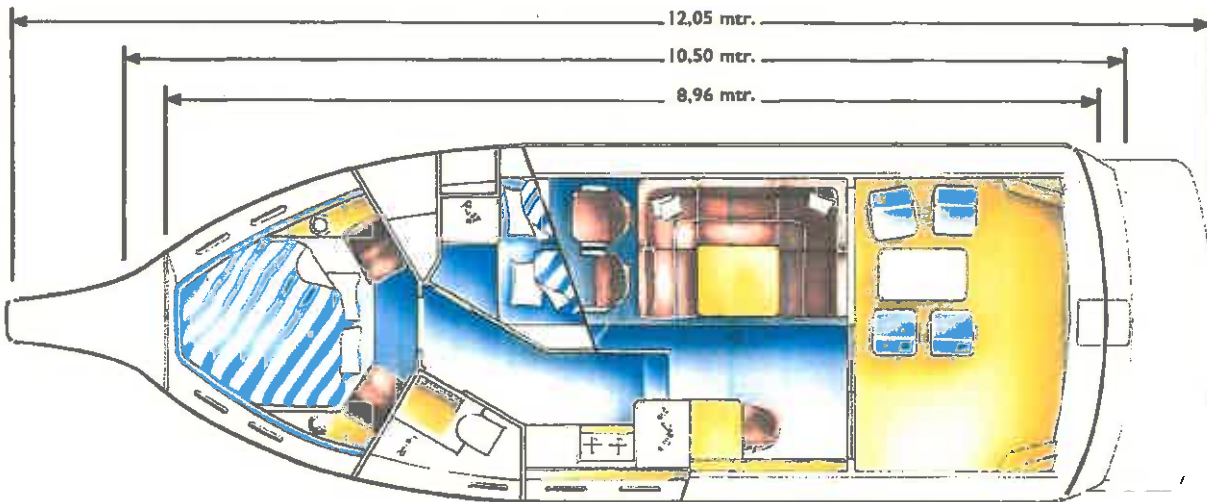

The Nidelv 4000 provides sleeping accommodation in two cabins, in addition to a toilet with shower, a spacious lounge and a functional pantry. All the conveniences on board have been given equal priority as regards positioning and design. It's a good life on a Nidelv 4000.

SPECIFICATIONS

LENGTH, INCL. BATHING PLATFORM: 12,05 mtrs.
WIDTH: 3,75 mtrs.
WEIGHT: 5700 kg
DRAUGHT: 0,90 mtr
HEADROOM IN CABIN: 1,95 mtr.
FUEL CAPACITY: 2 x 400 ltr.
WATER TANK: 260 ltr.
SEWAGE TANK: 300 ltr.
ENGINE INSTALLATION, HP.: 165 – 400 VOLVO PENTA
SPEED WITH 2 X 200 hk VOLVO DIESEL: APPROX. 34 knots.

We reserve the right to alter specifications.
